TEGO® Twin 4200 is the new universal substrate wetting additive for waterborne wood coatings, industrial coatings and printing inks, which can also be used in solventborne and even UV coatings. In addition to outstanding wetting and anti-cratering properties, TEGO® Twin 4200 provides no foam stabilization.

SILIKOPHEN® AC 900 and SILIKOPHEN® AC 1000 were designed for the high temperature applications of industrial objects, muffler coatings and oven coatings. Due to their ambient temperature curing capabilities, a feature highly coveted by manufacturers, these resins permit energy-saving coating application of large objects which would otherwise prove difficult in a more traditional oven-cure.

All of this technical information and much more of the region NAFTA can be found on the English homepage under www.tego.us and, as of April 1, in Spanish as well.

Visit our experts at the Evonik booth (#1707) at the 2014 American Coatings Show, held April 8-10 in Atlanta, Ga.

Company information

Evonik, the creative industrial group from Germany, is one of the world leaders in specialty chemicals. Profitable growth and a sustained increase in the value of the company form the heart of Evonik's corporate strategy. Its activities focus on the key megatrends health, nutrition, resource efficiency and globalization. Evonik benefits specifically from its innovative prowess and integrated technology platforms.

Evonik is active in over 100 countries around the world. In fiscal 2013 more than 33,500 employees generated sales of around €12.9 billion and an operating profit (adjusted EBITDA) of about €2.0 billion.
